1. Abstract & Vision

TacoToken (TACO) is a community-driven meme token on Binance Smart Chain (BSC) that blends political satire with transparent, tokenized governance. Inspired by the power of viral memes, TACO empowers its community to propose and vote on core protocol decisions—burn events, marketing allocations, ecosystem partnerships—through an off-chain Snapshot process and on-chain multisig execution. Our vision is to unite celebration of humor with decentralized decision-making, forging a token that’s as fun as it is fair.

3. Governance Model

TACO governance combines off-chain Snapshot voting with on-chain multisig execution, ensuring that token holders retain meaningful control:

1. **Proposal Submission:** Any holder with $\geq 0.1\%$ of circulating supply can create a proposal on [Snapshot.org].
 2. **Discussion Period:** 5 days of open debate in the TacoToken Discord and Telegram channels.
 3. **Voting Period:** 3 days; quorum set at 10% of circulating supply.
 4. **Execution:** Passed proposals are executed by a 3-of-5 multisig treasury within 48 hours.
 5. **Use of Funds:** Community votes direct burns, marketing spend, incentive distributions, and ecosystem development initiatives.
